

October 8, 1962

I am giving careful consideration to your communication of September 28th, and I am glad that we can continue to use this channel as a means of communicating privately and frankly.

I shall want to comment separately on other aspects of your letter, but because of the imminent discussions in the UN I want you to have my views promptly on the subject of nuclear testing. I believe that we are nearer to agreement on this issue than on others, and I believe that we should keep at it to see if we cannot promptly reach the understanding which the world wants and needs.

With respect to this topic, I am encouraged by the areas in which we are in accord and by your statement that the Soviet Union is prepared to make "new efforts" in order to conclude an early agreement. Certainly it would seem we are agreed in our approach to three types of tests -- in the atmosphere, in outer space and under water.

So I continue to think that we are within striking distance of a treaty banning nuclear tests in the atmosphere, in outer space and under water. I believe we should try to work out such an agreement in time to meet the target day of January 1, 1963, and I think also that in the meanwhile we should be working intensively to make progress as rapidly as possible on the remaining problem of testing under ground. I believe that our negotiators should return to their labors in an intense effort to reach agreement on the questions that still divide us, and I hope very much that they will be able to make real and rapid progress in the meetings now scheduled to resume on November 12th.
